

Pests in N.W. European Greenhouses

An Illustrated Overview of Species with special reference to Homopteran Pests.

Jan Piet Kaas

In *Pests in N.W. European Greenhouses* Dr. Kaas discusses important greenhouse pests in commercial greenhouse cultures and botanical collections. Pest groups from aphids to symphylids are commented and illustrated. A tool for pest-recognition by greenhouse staff and imported plant inspectors. With the clear and concise descriptions of important recognition features, micro- and macro pictures, pests can be identified fast and simple. The name of a species is the first step in assessing the potential plant risk. With this, other sources may be consulted for possibilities of biological and other types of control and the damage type to be expected. The book is written in English. It is a must have for everyone working with plants in protected cultures.

116 pages, 220 original illustrations, 15* 21 cm, hard back.
